Buyer Performance & Ranking

Measured against $2,500 earned per line per day

Sterling Styles Limited | 01 Jan 2026 - 24 Oct 2026

9,066 line-days · 38 lines · 3 units · 25 buyers · 533 styles · 13,850,314 pieces

Where the factory stands

Every figure rebuilt from the daily line-day rows.

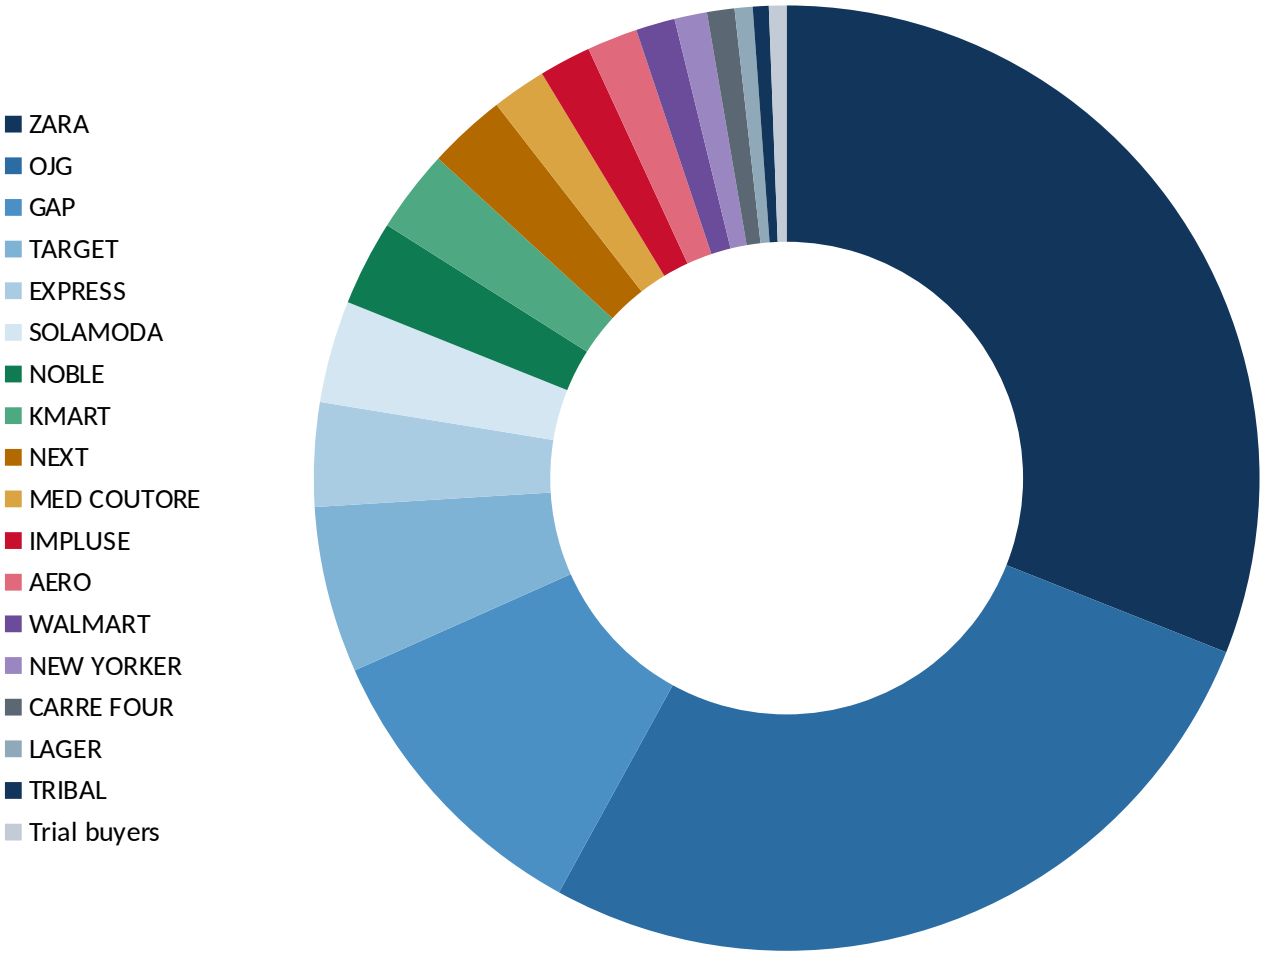

EARNED $ YTD	EARNED $ / LINE-DAY	BENCHMARK HIT RATE	CM $ / SMV MINUTE
$23,247,582	**$2,564**	**53.3%**	**0.0836**
CM value booked	+$64 vs benchmark	4,236 line-days below	factory blended price

EFFICIENCY	DHU %	CM $ / PIECE	PIECES
69.5%	**13.2%**	**1.678**	**13,850,314**
Jan '26 77.0% → Oct '26 64.1%	Jan '26 12.1% → Oct '26 14.4%	at 20.07 avg SMV	533 styles

The read: the factory clears the benchmark on average, but only 53.3% of individual line-days clear it — 4,236 line-days finished below $2,500. 11 of the 17 ranked buyers sit under it on their period average, worth $1,100,657 of capacity value. The bigger movement is time, not buyer mix: efficiency 77.0% → 64.1% on broadly unchanged manning while price per minute stayed inside a 0.0800–0.0882 band.

Where the earned value comes from

Share of total CM value booked, by buyer.

Buyer	Earned $	Share	$/line-day
ZARA	$7,208,435	31.0%	$2,911
OJG	$6,274,254	27.0%	$2,422
GAP	$2,402,256	10.3%	$3,128
TARGET	$1,323,568	5.7%	$2,199
EXPRESS	$826,218	3.6%	$3,130
SOLAMODA	$812,356	3.5%	$2,232
NOBLE	$677,871	2.9%	$2,690
KMART	$657,053	2.8%	$2,212
NEXT	$621,865	2.7%	$2,130
MED COUTORE	$431,527	1.9%	$1,769

The top three accounts carry 68% of the factory's earned value.

Earned $ per line-day vs the $2,500 benchmark

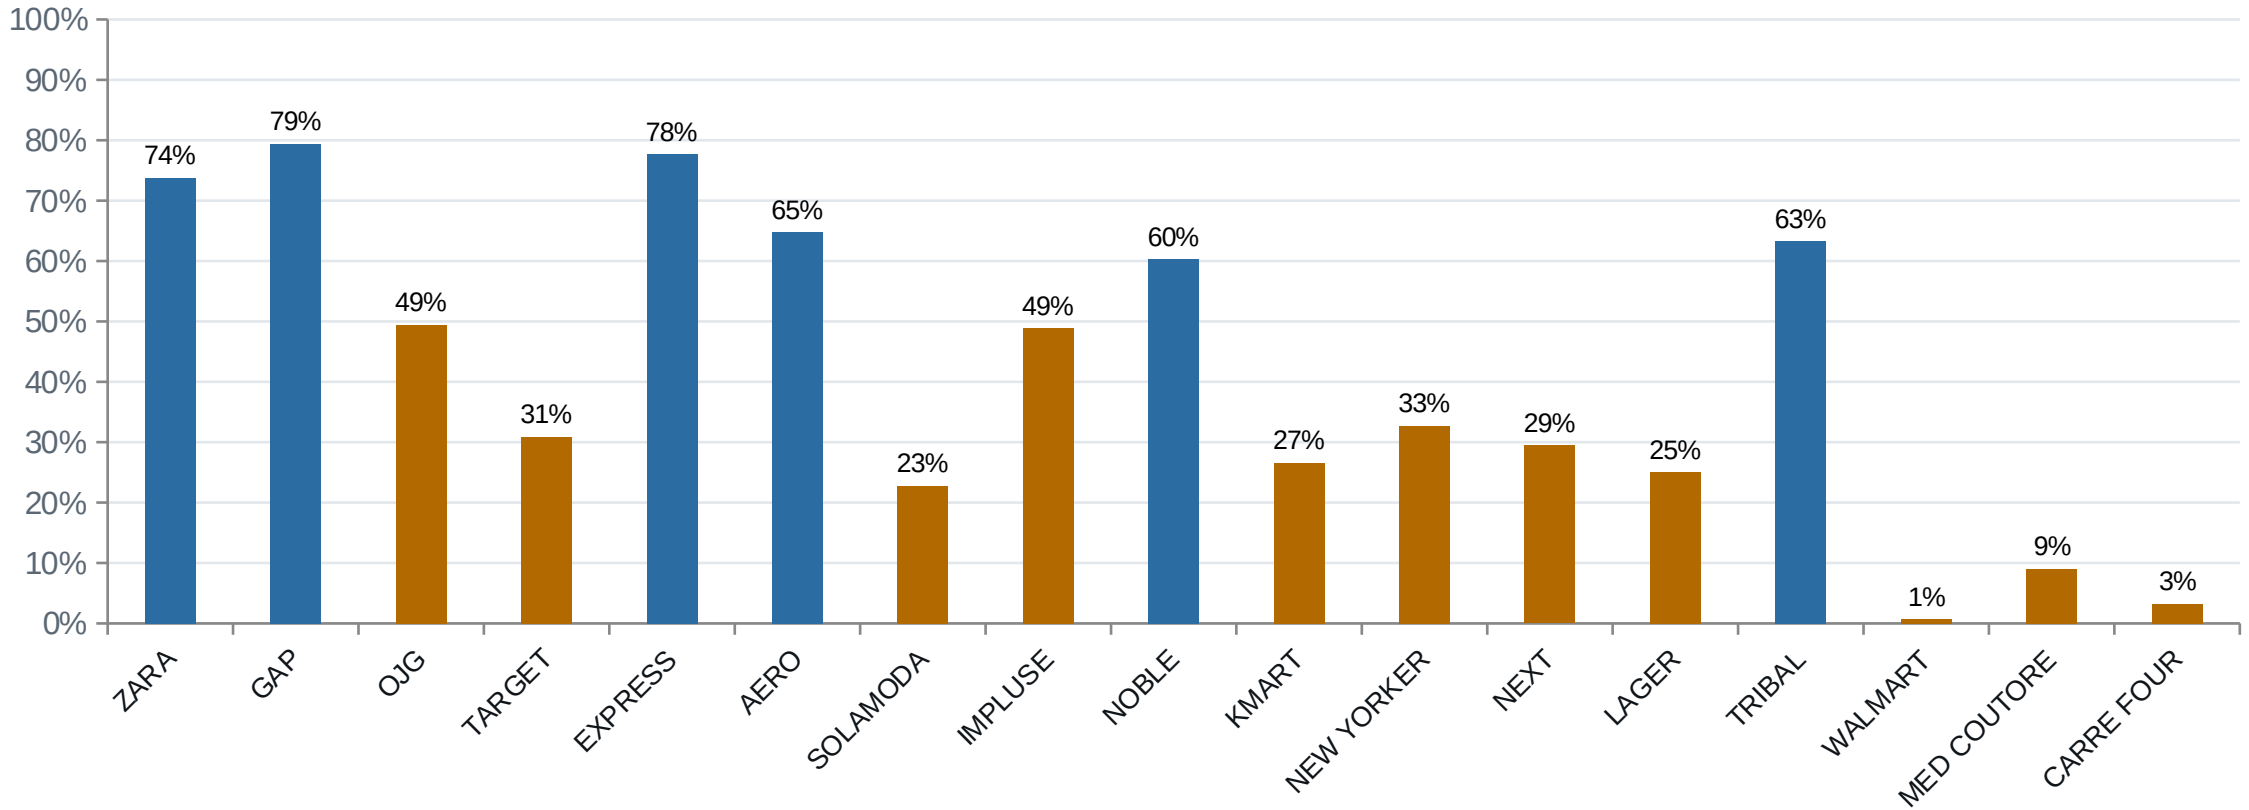

Green clears the bar, red does not. This is the single number the ranking is built on.

11 of the 17 ranked buyers sit below the line on their period average — 0 of them by less than $50 a day, which is a floor problem, not a price problem.

Consistency: how often the benchmark is actually hit

An account can average near $2,500 and still miss it most days. Share of that buyer's line-days earning $2,500 or more.

Factory average hit rate is 53.3%. The gap between a buyer's average and its hit rate is a fragmentation and start-up story, not a price story.

The ranking

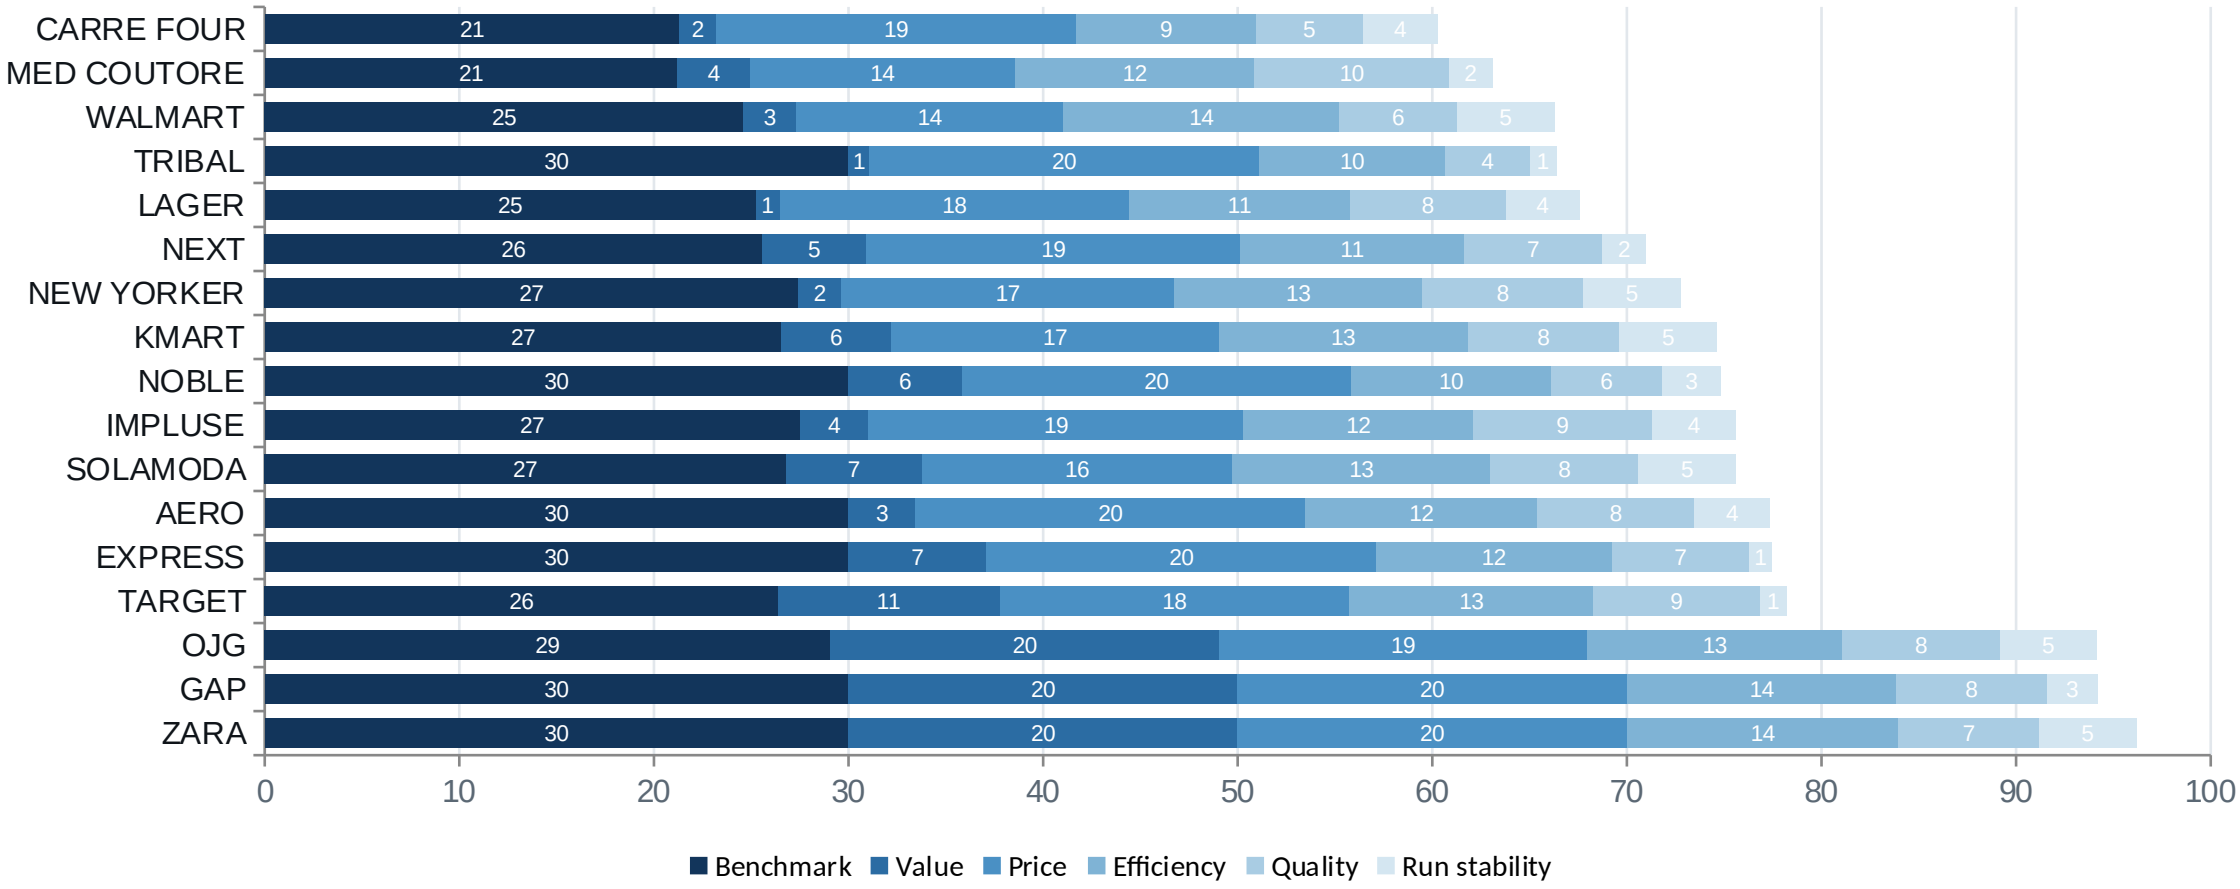

Six fixed standards, each scored out of 100 and weighted. Buyers under 40 line-days are scored but not ranked.

#	Buyer	Grade	Score	Line-days	Earned $	$/line-day	Hit rate	CM$/min	CM$/pc	SMV	Eff.	DHU	Run
1	**ZARA**	**A**	**96.2**	2,476	$7,208,435	$2,911	73.8%	0.0873	$1.893	21.7	74.5%	13.9%	10.8

16	**MED COUTORE**	**D**	**63.1**	244	$431,527	$1,769	9.0%	0.0574	$1.238	21.6	65.6%	8.6%	4.4
17	**CARRE FOUR**	**D**	**60.3**	123	$218,520	$1,777	3.3%	0.0780	$2.051	26.3	49.2%	18.2%	7.7

Standards — $2,500/line-day (30.0%) · 10.0% revenue share (20.0%) · $0.0843 per SMV min (20.0%) · 80.0% efficiency (15.0%) · 10.0% DHU (10.0%) · 10 run days (5.0%).

Where each buyer's points come from

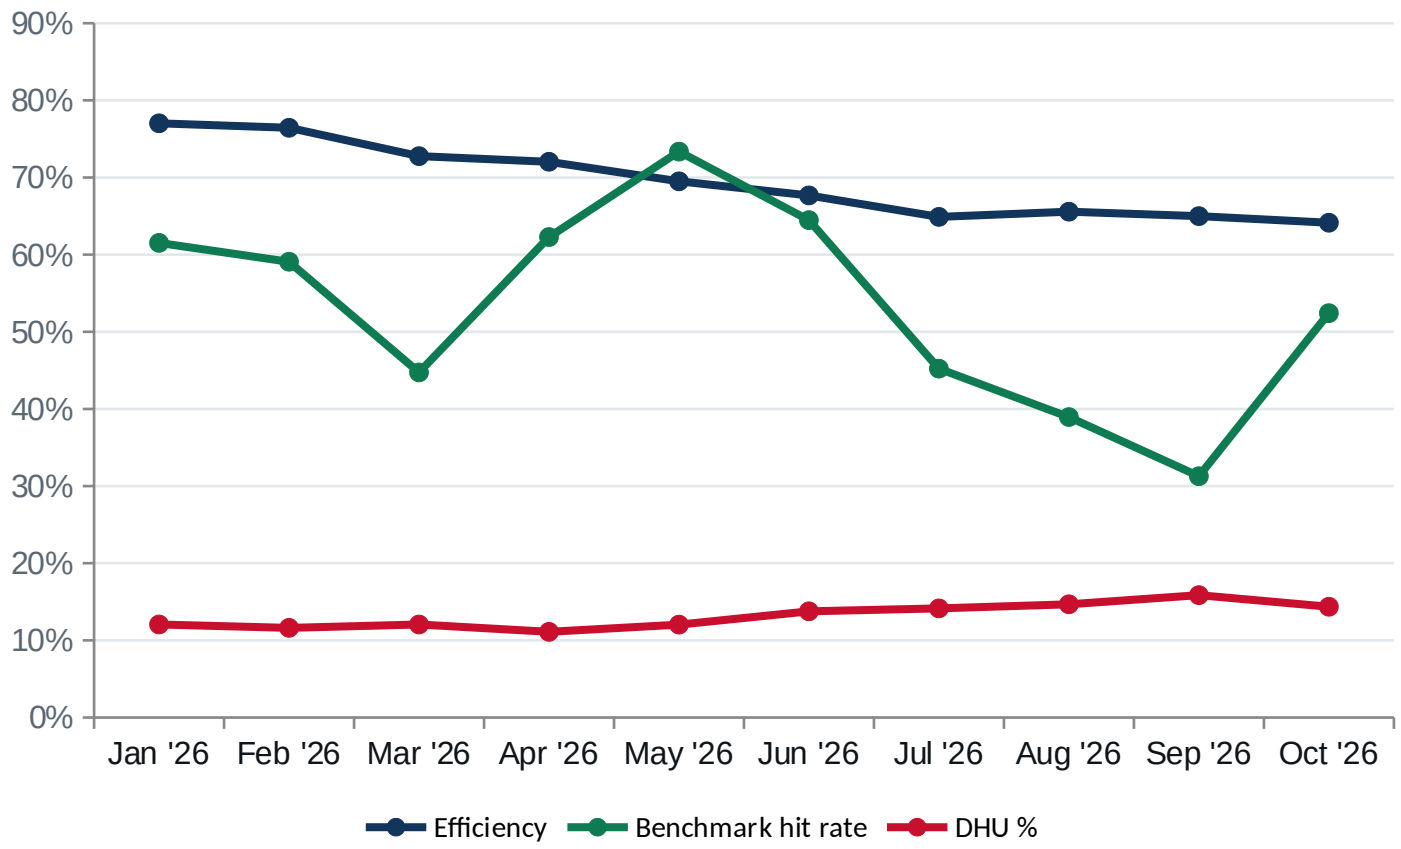

Total out of 100. A weak bar segment is a specific, fixable problem — not a general verdict.

Read the weak segment, not the total: a short "Benchmark" block means the line-day does not pay; a short "Price" block means the rate does.

The trend that outranks every buyer

Price held flat. Efficiency and the hit rate did not — on essentially unchanged manning.

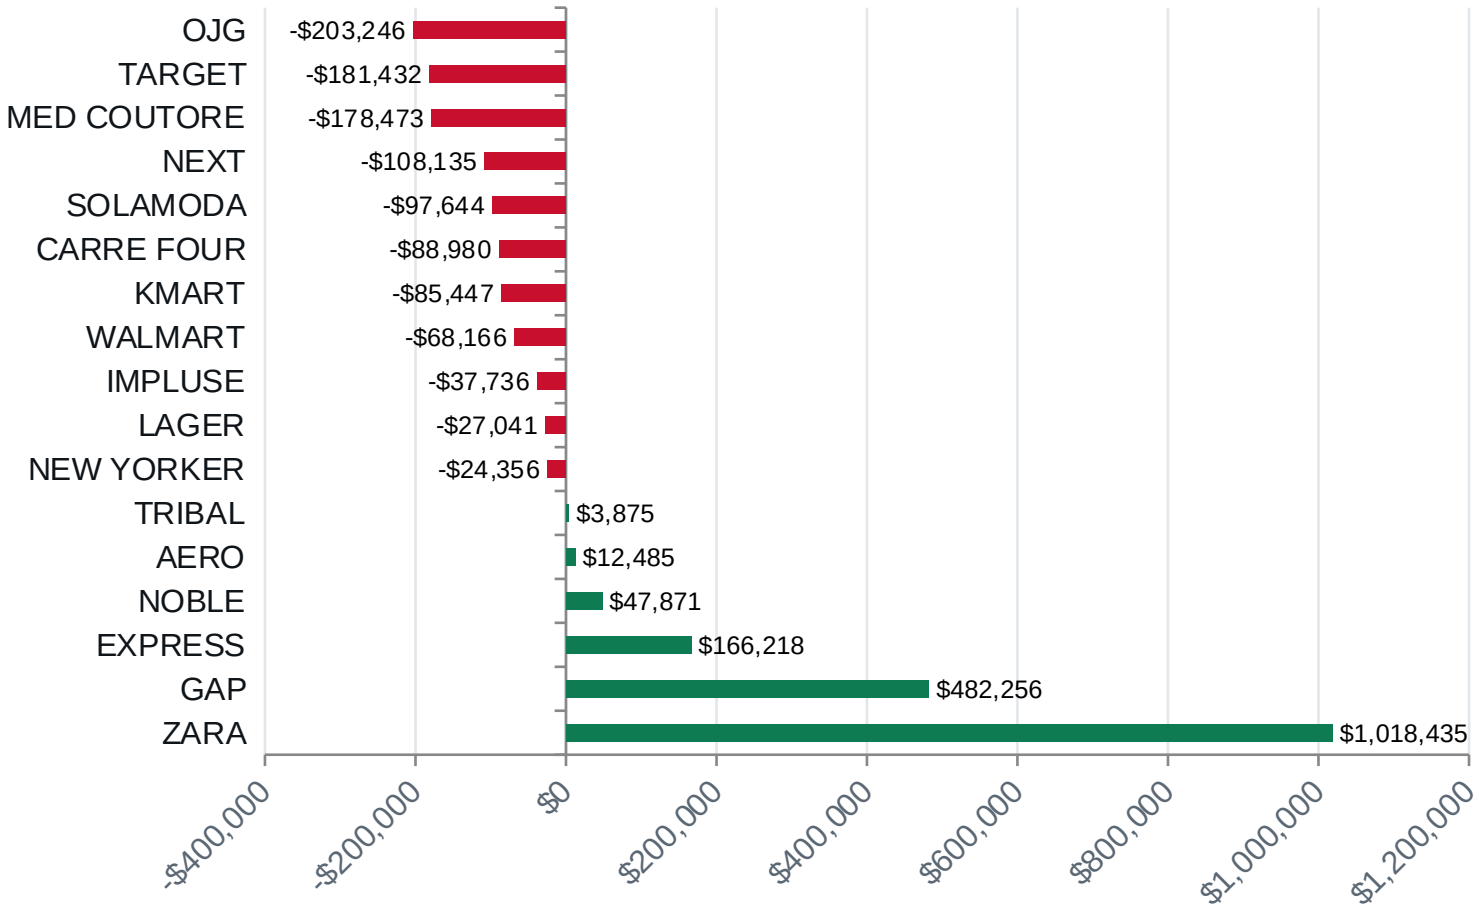

Month	$/line-day	Hit	Eff.	DHU
Jan '26	$2,739	61.5%	77.0%	12.1%
Feb '26	$2,607	59.1%	76.4%	11.6%
Mar '26	$2,292	44.7%	72.8%	12.1%
Apr '26	$2,747	62.3%	72.0%	11.1%
May '26	$3,042	73.4%	69.5%	12.0%
Jun '26	$2,767	64.5%	67.7%	13.8%
Jul '26	$2,403	45.2%	64.9%	14.1%
Aug '26	$2,276	38.9%	65.6%	14.7%
Sep '26	$2,217	31.3%	65.0%	15.9%
Oct '26	$2,512	52.4%	64.1%	14.4%

At Jan '26 efficiency the same line-days would have earned about $2,512,329 more — compare that with $1,100,657, the entire benchmark shortfall.

Surplus and shortfall against the benchmark

(Earned per line-day − $2,500) × line-days. Capacity value, not cash.

Below benchmark	Gap/day	Period gap
OJG	$78	$203,246
TARGET	$301	$181,432
MED COUTORE	$731	$178,473
NEXT	$370	$108,135
SOLAMODA	$268	$97,644
CARRE FOUR	$723	$88,980
KMART	$288	$85,447
WALMART	$448	$68,166
IMPLUSE	$210	$37,736
LAGER	$398	$27,041
NEW YORKER	$216	$24,356
TOTAL		**$1,100,657**

The shortfall is concentrated: the top two accounts carry 35% of it.

What $2,500 a day actually requires

The identity behind every number in this report — and the menu of ways to reach the benchmark.

Earned $ per line-day = CM $ per SMV minute × efficiency × operators × working hours × 60

If the line runs at	Available min	Earning min	CM $/min needed	At 20 SMV that is	Pieces/day needed
55.0% efficiency	45,000	24,750	**0.1010**	$2.020 /pc	1,238
60.0% efficiency	45,000	27,000	**0.0926**	$1.852 /pc	1,350
65.0% efficiency	45,000	29,250	**0.0855**	$1.709 /pc	1,463
70.0% efficiency	45,000	31,500	**0.0794**	$1.587 /pc	1,575
75.0% efficiency	45,000	33,750	**0.0741**	$1.481 /pc	1,688
80.0% efficiency	45,000	36,000	**0.0694**	$1.389 /pc	1,800
85.0% efficiency	45,000	38,250	**0.0654**	$1.307 /pc	1,913

A 75-operator line working 10.0 hours holds 45,000 minutes. At 65% efficiency the price must be $0.0855 a minute to clear $2,500; at 75.0% the same line clears it at $0.0741. Every route to the benchmark is a trade between those two columns.

How the below-benchmark buyers get to $2,500

Three alternative routes, each solved from that buyer's own numbers. Hitting any one of them clears the bar — they are not a sequence.

Buyer	Now $/day	Gap/day	Period gap	A: CM $/pc	A: ask	B: SMV needed	C: efficiency needed	Verdict
OJG	$2,422	$78	$203,246	$1.526 → $1.576	+3%	19.2 → 18.6	70.0% → 72.3%	Floor can close it
TARGET	$2,199	$301	$181,432	$1.643 → $1.868	+14%	21.7 → 19.1	66.8% → 75.9%	Floor can close it
MED COUTORE	$1,769	$731	$178,473	$1.238 → $1.750	+41%	21.6 → 15.3	65.6% → 92.8%	Price must carry it
NEXT	$2,130	$370	$108,135	$1.375 → $1.614	+17%	16.9 → 14.4	61.2% → 71.9%	Floor can close it
SOLAMODA	$2,232	$268	$97,644	$1.536 → $1.720	+12%	22.8 → 20.4	70.6% → 79.0%	Tight — split it
CARRE FOUR	$1,777	$723	$88,980	$2.051 → $2.886	+41%	26.3 → 18.7	49.2% → 69.3%	Floor can close it
KMART	$2,212	$288	$85,447	$1.058 → $1.196	+13%	14.9 → 13.2	68.2% → 77.0%	Floor can close it
WALMART	$2,052	$448	$68,166	$1.040 → $1.267	+22%	17.9 → 14.7	75.6% → 92.1%	Price must carry it
IMPLUSE	$2,290	$210	$37,736	$1.636 → $1.786	+9%	20.1 → 18.4	62.8% → 68.6%	Floor can close it
LAGER	$2,102	$398	$27,041	$1.778 → $2.114	+19%	23.4 → 19.7	60.5% → 71.9%	Floor can close it
NEW YORKER	$2,284	$216	$24,356	$1.493 → $1.633	+9%	20.7 → 18.9	68.1% → 74.5%	Floor can close it

Route A raises CM per piece with SMV and efficiency unchanged — the merchandising ask. **Route B** takes work out of the garment at the SAME CM per piece, so the rate per minute rises without touching the price — the IE job. **Route C** runs the line better at the current price and SMV — realistic only under about 78%.

The realistic route: fix the floor first, then ask for the rest

Lift efficiency to 75.0%, then ask only for whatever price is still missing. This is what turns a rejected ask into a signed one.

Buyer	Today	At 75.0% efficiency it earns	Price ask still needed	vs the price-only ask	Reduction in the ask
OJG	$2,422	$2,697	**none — it clears on its own**	+$0.049 /pc	100% smaller
TARGET	$2,199	$2,552	**none — it clears on its own**	+$0.225 /pc	100% smaller
MED COUTORE	$1,769	$2,040	**+$0.279 /pc**	+$0.512 /pc	45% smaller
NEXT	$2,130	$2,719	**none — it clears on its own**	+$0.239 /pc	100% smaller
SOLAMODA	$2,232	$2,451	**+$0.031 /pc**	+$0.185 /pc	83% smaller
CARRE FOUR	$1,777	$2,673	**none — it clears on its own**	+$0.835 /pc	100% smaller
KMART	$2,212	$2,507	**none — it clears on its own**	+$0.138 /pc	100% smaller
WALMART	$2,052	$2,125	**+$0.184 /pc**	+$0.227 /pc	19% smaller
IMPLUSE	$2,290	$2,760	**none — it clears on its own**	+$0.150 /pc	100% smaller
LAGER	$2,102	$2,626	**none — it clears on its own**	+$0.336 /pc	100% smaller
NEW YORKER	$2,284	$2,561	**none — it clears on its own**	+$0.141 /pc	100% smaller

8 of the 11 below-benchmark accounts need no price increase at all once the line runs at 75.0%. The remaining 3 still need a price move, but a much smaller one — the largest ask falls from +$0.512 to +$0.279 per piece. That is the difference between a rejected costing and a negotiated one.

What to do next

1	**Run the floor recovery first**	Efficiency 77.0% → 64.1% on broadly flat manning is worth about $2,512,329 across the period — against $1,100,657 for every price ask in this report combined. Nothing in the buyer mix competes with it.
2	**Fix consistency, not just averages**	Only 53.3% of line-days clear $2,500. 0 accounts average close to the benchmark yet hit it under 40% of the time — start-up loss from short runs, fixable with style consolidation.
3	**Take the largest shortfalls to costing**	OJG and TARGET carry 35% of the total gap. Check the verdict column: where efficiency alone cannot close it, price has to carry it.
4	**Use the split route in every negotiation**	Going in with a 41% ask fails. Going in with "we are lifting the line to 75.0% and need a few cents" is a conversation that closes.
5	**Protect the A-grade accounts**	The 3 A-grade accounts carry 68% of earned value. Defend their line allocation before chasing new enquiries.
6	**Re-run this pack monthly**	The workbook is formula-driven: paste next month's line-days into DATA and every KPI, score, grade and route recalculates.

How the ranking was built

Six fixed standards. Each buyer is scored against the standard, not against other buyers — so the scores stay comparable next month.

#	Measure	What it answers	Standard = 100	Weight	Why it matters
1	**Benchmark achievement**	Was that line-day worth giving away?	$2,500 earned per line per day	**30.0%**	Already contains price, efficiency and manning inside it
2	**Value delivered**	How much of total earned value does it carry?	10.0% share of factory earned $	**20.0%**	Scale pays the wages; a rate advantage alone cannot outrank it
3	**Price**	What is paid per minute of sewing work?	$0.0843 per SMV minute	**20.0%**	The only fair comparison across different garment complexity
4	**Efficiency**	How well does the floor run this work?	80.0% efficiency	**15.0%**	Separates a pricing problem from a floor problem
5	**Quality**	How much output is lost to rework?	10.0% DHU	**10.0%**	Rework is capacity paid for twice
6	**Run stability**	How long does a style hold a line?	10 consecutive line-days	**5.0%**	Every changeover costs learning-curve output

Scores are capped at 100 on each line. This is a scorecard against a standard, not a competition — paying double the benchmark rate is excellent, but it should not cancel out a floor running at 55%. Buyers under 40 line-days are scored and listed but not ranked. Grades: A 85+, B 75–84, C 65–74, D under 65.

SMV is deliberately not scored on its own: a heavier garment should cost more than a lighter one. SMV also cancels out of the earning identity — it only becomes a lever when it falls while CM per piece holds.
